

Program Syllabus Booklet

Masters of Technology in Construction Technology & Management (M. Tech CTM-145)

Session: 2020 – 21

Guru Gobind Singh College of Engg. & Tech. Guru Kashi University, Talwandi Sabo

| S No. | Content | Page No |
|-------|--|---------|
| | | |
| 1 | Program Specific Outcomes and Program Outcomes Annexure -1 | 4-5 |
| 2 | Curriculum / Scheme - Annexure-2 | 6-9 |
| 3 | Semester wise Syllabi - Annexure-3 | 10-58 |
| 4 | Academic Instructions - Annexure-4 | 59 |

Program Name: Masters of Technology in Construction Technology & Management Program Code: 145

The Program Outcomes (POs) for the Program Masters of Technology in Construction

Technology & Management are as given below:

M.tech CTM post graduates will be able to:

| PO | Statement |
|----|--|
| 1 | Knowledge: Apply the advance knowledge of mathematics, science, engineering |
| | fundamentals, and an engineering specialization to the solution of complex |
| | engineering problems |
| 2 | Problem analysis: Identify, formulate, review research literature, and analyze |
| | complex and advanced engineering problems reaching substantiated conclusions |
| 2 | using first principles of mathematics, natural sciences, and engineering sciences. |
| 5 | Design/development of solutions: Design advanced solutions for complex |
| | the specified peeds with appropriate consideration for the public health and |
| | safety and the cultural societal and environmental considerations |
| 4 | Conduct investigations of complex problems : Effectively Use research-based |
| • | knowledge and research methods including design of experiments, analysis |
| | and interpretation of data, and synthesis of the information to provide valid |
| | conclusions. |
| 5 | Modern tool usage: Create select and apply appropriate techniques |
| | resources and modern engineering and IT tools including prediction and |
| | modeling to complex engineering activities with an understanding of the |
| | limitations. |
| 6 | The engineer and society. Apply reasoning informed by the contextual |
| | knowledge to assess societal, health, safety, legal and cultural issues and the |
| | consequent responsibilities relevant to the professional engineering practice. |
| 7 | Environment and sustainability: Understand the impact of the advance |
| | professional engineering solutions in societal and environmental contexts, |
| | and demonstrate the knowledge of, and need for sustainable development. |
| 8 | Individual and team work: An ability to independently carry out advance |
| | research /investigation and development work to solve the practical problems. |
| 0 | Communication. An ability to function officiatively on a team whose members |
| 9 | Communication: All adding to function effectively on a team whose members |
| | ogenier provide leadership, create a collaborative and inclusive environment, |
| | establish goals, plan tasks, and meet objectives |
| 10 | Project management and finance: Students should be able to demonstrate a |
| | degree of mastery over the area as per the specialization of the program. The |

| | mastery should be at a level higher than the requirements in the appropriate bachelor program. |
|----|---|
| 11 | Life-long learning: Ability to Analyze, evaluates, and select computer applications for the purpose of efficient and effective construction project management. |
| 12 | Ethics: Enhance the ability to Analyze construction projects related to fundamental aspects of construction management (i.e., cost, schedule, quality, safety, ethics) and develop appropriate solutions |

The Program Specific Outcomes (PSOs) for the Program Masters of technology in Construction Technology & Management are as given below:

| PSO | Statement |
|-----|--|
| 1 | Enhance employability and/or entrepreneur skills through in-house and onsite training. |
| 2 | Provide solutions/procedures to societal and rural development problems through research and innovative practices. |
| 3 | Enforcement of environmental legislation and Public awareness related to civil engineering. |

*Dissertation Phase – I:-The work will start in semester III and should preferably be a problem with research potential and should involve scientific research, design, generation/collection and analysis of data, determining solution and must preferably bring out the individual contribution. Seminar should be based on the area in which the candidate has undertaken the dissertation work as per the common instructions for all branches of M. Tech. The examination shall consist of the preparation of report consisting of a detailed problem formulation with objectives and a literature review. The preliminary results (if available) of the problem may also be discussed in the report. The work has to be presented in front of the examiners panel set by Head and PG coordinator. The candidate has to be in regular contact with his guide and the topic of dissertation must be mutually decided by the guide and student.

*Dissertation Phase – II:-It is a continuation of research work started in semester III. He has to submit the report in prescribed format and also present a seminar. The dissertation should be presented in standard format as provided by the department. The candidate has to prepare a detailed research report consisting of introduction of the problem, problem statement, literature review, objectives of the work, methodology (experimental set up or numerical details as the case may be) of solution and results and discussion. The report must bring out the conclusions of the work and future scope for the study. The work has to be presented in front of the examiners panel consisting of an approved external examiner, an internal examiner and a guide, coguide etc. as decided by the Head and PG coordinator. The candidate has to be in regular contact with his guide.

1: Each theory paper examination will be of three hours duration.

Annexure-3

Course Name: Construction Management and Equipment

Course Code: A145101

Semester: 1st

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| СО | Statement |
|----|---|
| 1 | Understand the construction equipment practices and techniques to be used in the field. |
| 2 | Apply theoretical and practical aspects of project management techniques to achieve project goals. |
| 3 | Become familiar with construction equipment and their capabilities |
| 4 | Learn to utilize construction equipment on site work and heavy civil projects |
| 5 | Properly select heavy equipment based on applications, utilization, productivity, and other factors |

Course Contents

UNIT I

10 hrs

Engineering Economy: Principle of Engineering Economy, Minimum cost point analysis, breakeven point analysis, Depreciation and depletion.

- (b) Construction of elements of a building
- (c) In demolition of buildings
- (d) Safety lacuna in Indian scenario.

UNIT II

10 hrs

Construction Planning: Need of construction planning, Constructional Resources, construction team, stages in construction, preparation of construction schedule, Job layout, inspection and quality control.

General Management: Introduction and characteristics of management, Principle and

function of management, Scientific management.

UNIT III

10 hrs

Materials Management: Scope, Objective and functions of material management, Procurement

and store management, Materials handling management, Inventory control and management. Disposal of Surplus Materials

Earth Moving Equipment : Crawler and wheel tractors their functions, types an specifications; Gradability Bull dozers and their use; tractor pulled scrapers, their sizes and output; effect of grade an rolling resistance on the output of tractor pulled scrapers Earth loaders; Placing and compacting earth fills. Power shovels-functions, selection, sizes, shovel dimension and clearances, output. Draglines-functions, types sizes, output clamshells; Safe lifting capacities and working ranges cranes; Hoes, Trenching machine types and production rate calculation of producing rates of equipment ; examples.

UNIT IV

10 hrs

7.Hauling Equipment : Truck's; Bottom, dump wagons; capacities of trucks and wagons Balancing the capacities of hauling units with the size excavator; effect of grade, rolling resistance and altitude on the cost/performance of hauling equipment; balancing excavating hauling equipment examples.

Drilling, Blasting and Tunneling Equipment: Definition of terms, bits, Jackhammers, Drifters, wagon drills, che drills, piston drills, blast hole drills, shot drills, diamond drills, tunneling equipment, selecting the drilling method equipment; selecting drilling pattern; Rates for drilling rock, compressors.

Pile Driving Equipment: Pile hammers, selecting a pile hammer, loss of energy due to impact, Energy losses due to causes other than impact.

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| CO | Statement |
|----|--|
| 1 | Learn about the special ingredients of concrete |
| 2 | Know different property ingredients of concrete. |
| 3 | Understand the use of various admixtures to be used in Preparation of Mixes. |
| 4 | Estimate the properties of fresh and harden concrete. |
| 5 | Prepare the design concrete mixes. |

Course Contents

UNIT I

10 hrs

Introduction of Concrete materials, Admixtures, Fly Ash, Polymers, Early Age Properties, Strength, Permeability & Durability.

Principles of Concrete mix design, Concrete Mix Design procedure by: IS/ACI/British Standards.

UNIT II

10 hrs

Concreting Operations-Practices and Equipment, Batching; Mixing; Transporting; Placing and Compacting; curing.

Properties and technique of construction for concrete, Fiber reinforced concrete, light weight concrete, heavy weight concrete, Foam concrete, high performance Concrete.

UNIT III

10 hrs

Special concrete operations, shot Crete, grouting, grunting, under water concreting, hot and cold weather concrete, pump able concrete.

Construction techniques for reinforced concrete elements-materials, Principles and procedures for beams, slabs, columns, Foundations, walls and tanks, design and fabrication of form work for R.C.C elements.

UNIT IV

10 hrs

Prestressed concrete construction- Principle, methods, materials, Tools and equipment for the construction of a prestressed bridge.

Inspection and Quality Control of Concrete Construction- Stages, Principles, Checklist, Statistical Controls, procedures.

Practical Exercises:

Testing of aggregates-fine and coarse as per BIS procedure.

Testing of cement with reference to IS specifications and Cement Grade.

Concrete Mix Design for desired grade from given materials.

a) Design and testing of workability of concrete for a given C.C. proportion.

Design and determination of Cube Strength with given materials and proportions.

Design of Concrete Mix proportions.

Study of effect of compaction of strength of concrete.

Study of effect of plastic mixers on workability of concrete.

Study of permeability of concrete.

Conduct chemical analysis of hardened concrete to determine the cement content.

Inspection of a concrete construction site and preparation of report showing correct and incorrect practices.

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| СО | Statement |
|----|---|
| 1 | Articulate the tradeoffs between easy computation and accuracy. |
| 2 | Execute basic commands and scripts in a mathematical programming language |
| 3 | Demonstrate proficiency in the use of input/output commands including: command line, file, and graphical. |
| 4 | Create changes in program flow using control structures. |
| 5 | Modularize program construction and increase code re-uses using functions. |

Course Contents

UNIT I

10 hrs

Equations: Rots of Algebraic, Transcendental equations, Solution of linear simultaneous Equations by different methods using - Elimination, Inversion, Gauss - Jordan methods. Homogeneous Problems and Eigen Value Problems. Nonlinear Equations, Interpolation.

UNIT II

10 hrs

New Marks Method: Solution of determinate and indeterminate Structures by using New Mark's Procedure. Statistical Methods: Method of Correlation and Regression Analysis.

UNIT IV

10 hrs

Initial Value Problems: Galerkin's Method of Least Square, Initial Value problem by Collocation points, Runga Kutta Method.

Newmark's Implicit and Explicit Solutions for Non Linear Problems and Convergence Criteria.

Course Name: Building Planning and Design

Course Code: A 145104

Semester: 1st

| L | Т | Р | C r |
|-----|------|------|--------------|
| 4 | 0 | 0 | 4 |
| Tot | al H | ours | 5: 40 |

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| СО | Statement |
|----|--|
| 1 | Understand basic principles of building design and planning. |
| 2 | Explore building drawing as a way of discovering and developing ideas for designing residential, commercial and public buildings. |
| 3 | Develops basic drawing skills; create multilayer architectural and working drawing drawings. |
| 4 | Implement planning strategies and policies. |
| 5 | Apply fundamentals of management to utilize functions of management in construction. Like Demonstrate leadership qualities by implementing construction project processes with control |

Course Contents

UNIT I

10 hrs

Land Acquisition Act 1894 (short titles, extent & definitions only) Municipality act 1911 (short titles, extent & definitions only, Power of committee for making bylaws, for punishment, to sanction). Architectural Planning and Layout: Principles of planning a building, Factors affecting selection of site for building, Sun & the building

UNIT II

10 hrs

Soil formation, particle size analysis, Indian Standard Soil Classification, time-settlement curve, Proctor test, compaction of sand, factors affecting compaction, field compaction methods, calculation of Bearing Capacity of soil by Standard Penetration Test, soil investigation report, types of shear failures, effect of water table on B.C., Settlement cases, calculation of B.C. by Plate Load Test.

UNIT III

10 hrs

Earthquake: Hazardous effects on structures & Ground, General guidelines for earthquake resistance buildings. Liquid faction, factors affecting liquefaction & prevention,

UNIT IV

10 hrs

Various Loading Conditions and Analysis of Multistoried Complex (Kani's Method for vertical loads and Portal Method for Lateral loads) Structural Design of Beams, Columns, Slabs, Foundations and Stairs.

Structural Drawings

- 5. IS 6403 (1981): Bearing capacity of shallow Foundation. BIS. New Delhi.

Course Name: Environmental Engineering & Management

Course Code : A 145105

Semester: 1st

(Elective-I)

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| СО | Statement |
|----|--|
| 1 | Understood Sewage quantity and quality for better treatment so as to reduce scarcity by recycling waste water |
| 2 | Learn about industrial waste water quantity and quality for achieving better sanitation in society |
| 3 | Use population forecasting methods. |
| 4 | Design various water treatment units and plan their operations on the basis of raw water quality and water demand. |
| 5 | Apply knowledge of advanced water treatment processes for individual water purification |

Course Contents

UNIT I

12 hrs

Environment & Ecology: Definition and understanding of concepts. Ecosystem, Energy flow in ecosystem, water, carbon and nitrogen cycle community's inter-relationships in and ecosystem.

Type of Pollutants and Protection of Environment:

Sources, causes and measurement of water pollution surface water and underground water, water Quality criteria for various uses of fresh water, river basis studies for surface water pollution control biochemical oxygen demand, effect of oxygen demanding wastes on rivers.

Domestic and industrial wastes :

Sources, standards for disposal of waste water Industrial effluents, Basic unit operation. In control of waste water pollution, design features for treatment for disposal of sewage effluents; guidelines of CPCB for abatement of industrial pollution technologies for control of water pollution from industries.

UNIT II

12 hrs

Air and Noise pollution:

Definition Principle materials causing pollution types of air contaminants. Their sources and effects on living and nonliving materials permissible limits. Air pollution control-Basis principles, natural self cleansing, pollution control methods and various engineering devices to control particulate and gaseous pollutants, controlling and pollution from automobiles.

Noise Pollution:

Definition, sources of noise and its units, adverse effects of noise pollution, sound pressure level and its measurement, octave hand and its importance; noise pollution control measures.

Land damage due to Mining: Open cast mining and its ill effects, Environmental protection practices in Mining and Environment Management Plans. City and Housing Environment: Introduction, stage of Housing/city environment, Environmental consideration in town-planning, Measures for improving city environment.

UNIT III

6 hrs

Current issues in Environmental Engineering:

Global warming Ozone depletion, Acid Rain, Oil pollution, Radiation Hazard and Control, Role of non-convention sources of energy in environment.

Acts/Legislation Provisions:

Veed for laws various acts, Rules and notifications. Salient features of various acts: The water Prevention and Control of pollution) Act 1974. The water (prevention and Control of pollution) Cass Act, 077. Ar (Prevention and control of Pollution) Act 1981. The Environment (Protection) Act 1986, The Public Hability insufance Act, 1991. The forest Act 1927, the wild life (Protection) Act 1927, The Forest (Conservation) Act, 11980, various other Rules and notification for control of pollution.

UNIT IV

10 hrs

Environmental Impact Assessment: Definition and its importance for Environment Management, Constituents of Environment. Impact Assessment Report, Steps involved in preparing EIA,EIA methodologies Projects under EIA, Environment Impact Statement, Constraint in implementation of EIA. Impact prediction water, Resources Projects and other relevant case studies. Application of Biotechnology for Environmental Management: Basic concepts and techniques, Application for industrial effluent: Solid waste management, Bio-fertilizers and Bio-pesticides; Plant tissue culture in forestry. Bio safety aspects, Bio-remedial.

Laboratory Work/Field Tasks:

- 1. Testing of water for various parameters such as PH, DO, conductivity.
- 2. Determination of BOD for Domestic Waste/Industrial Waste.
- 3. Determination of MPN of given sample.
- 4. Air sampling to particulate matter and other gaseous contaminants.
- 5. Determination of concentration of Metallic pollutants by using Atomic Absorption spectrometer.
- 6. Monitoring of vehicular pollution emission.
- 7. Enervations of noise levels for indoor and outdoor noise levels.
- 8. Visit and submission of Report for treatment of waste water plant of any industry.

Course Name: Bridge Engineering

Course Code: A145106

Semester: 1st (Elective-I)

| L | Т | Р | C r | | | | |
|------------------------|---|---|--------|--|--|--|--|
| 4 | 0 | 0 | 4 | | | | |
| Total Hours: 40 | | | | | | | |

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| СО | Statement |
|----|---|
| 1 | Discuss the IRC standard live loads and design the deck slab type bridges. |
| 2 | Analyze the box culverts for the given loading and detail the box culverts. |
| 3 | Design and detail of T-Beam bridges. |
| 4 | Understand the design and check the stability of piers and abutments. |
| 5 | Discuss the bridge foundations and prepare the bar bending schedule |

Course Contents

UNIT I

10 hrs

Introduction: Definition and components of a bridge, Classification of bridges, Choice of a bridge type.

Investigation for Bridges: Need for investigation, Selection of bridge site, Determination of design discharge for River Bridge, Linear waterway, Economical span, Vertical clearance, scour depth, Afflux, Traffic projection.

UNIT II

10 hrs

Standard Specifications for Road Bridges: Indian Road Congress Bridge Code, Width of carriageway, Clearances, Loads to be considered; Dead load, I.R.C. standard live loads, Impact effect, Application of Live load on decks, Wind load, Longitudinal forces, Centrifugal forces, Horizontal forces due to water current, Buoyancy effect, Earth pressure, Deformation stresses, Erection stresses, Temperature effects, and Seismic force.

Reinforced Concrete Bridges: General, Types of bridges; balanced cantilever bridges, Continuous girder bridges, rigid frame bridges, Portal Frame and Arch bridges. Detailed design of solid slab and T-beam bridges,

UNIT III

10 hrs

Steel Bridges: General, Type of Steel bridges; Plate girder bridges, Box girder bridges, Truss bridges, Cantilever bridges, Cable stayed bridges, and Suspension bridges.

Sub-structure and Foundation: Design of piers and abutments (Masonry & R.C.C.). Types of foundations; Shallow, Pile, and Well foundations including their construction details.

UNIT IV

10 hrs

Bearings & Appurtenances: Different types of bearings, joints and handrails.

Construction and Maintenance of Bridges: Methods of construction of concrete bridges. Causes of Bridge failures, Inspection and maintenance.

Instructions to the Examiner: Total eight questions are to be set, covering the complete syllabus, out of which, the students are required to attempt any five questions.

Course Name: Disaster Management

Course Code: 150002

Semester: 1st

(Audit Course)

| L | Т | Р | C r | | | | |
|------------------------|---|---|--------|--|--|--|--|
| 1 | 0 | 0 | 1 | | | | |
| Total Hours: 40 | | | | | | | |

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| СО | Statement | | | | | | | |
|----|---|--|--|--|--|--|--|--|
| 1 | Provide basic conceptual understanding of disasters and its relationships with development. | | | | | | | |
| 2 | Understand approaches of Disaster Risk Reduction (DRR) and the relationship between vulnerability, disasters, disaster prevention and risk reduction. | | | | | | | |
| 3 | Understand Medical and Psycho-Social Response to Disasters. | | | | | | | |
| 4 | Prevent and control Public Health consequences of Disasters | | | | | | | |
| 5 | Enhance awareness of Disaster Risk Management institutional processes in India | | | | | | | |

Course Contents

UNIT I

10hrs

Disaster Reduction :Earthquake resistant design of structures, Response spectra and design earthquake parameters, Principles and philosophies, Codal provisions, Factors affecting damage to structures, Enforcement of codal provisions, Strong motion instrumentation and data processing, Effective rescue operation, General planning and design aspects, Conventional earthquake resistant design, Seismic base isolation method, retrofitting, Training and lecturing at various levels, Preparedness to meet earthquake disaster, Programmers for public awareness, demonstrations and exhibitions, Information management

(Safety, emergencies, management and planning, design, response, user experience problems and case studies), Proper land use practices, long term disaster preparedness measures.

UNIT II

10hrs

Precautions after a major earthquake, Preparedness for medical supply Emergency care (First aid, Home remedies), Disposal of dead bodies (Human and Cattle), Care for old and orphans. Indirect Damages Damage due to ground failures, Landslides, rockslides, liquefaction, fire, floods, tsunamis, release of hazardous material like poisonous gas, nuclear radiation.

UNIT III

10hrs

Disaster Management- Management cell, Central crisis management core group, damage reconnaissance, Management of relief and rehabilitation (Infrastructure rehabilitation, Housing rehabilitation, Social rehabilitation), Role of volunteers, Emergency operation centers, Information system, Danger zone restrictions, Cooperation with local authority, Coordination for international relief, Role of government, NGO's, Business and donors, Role of remote sensing in relief operations, Information management and related technologies in engineering and disaster management.

UNIT IV

10hrs

The design and management of Disaster Information Resource Network, Asian Disaster Preparedness Centre, Regional data base, Contacts and Sources, CD - ROM Library for Natural Disaster Management, Regional Disaster Documentation Centre, Non Governmental Organizations.

Course Name: Foundation Design and Construction

Course Code: A145201

Semester: 2nd

| L | Т | Р | C r | | | |
|------------------------|---|---|--------|--|--|--|
| 4 | 0 | 0 | 4 | | | |
| Total Hours: 40 | | | | | | |

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| СО | Statement |
|----|--|
| 1 | Know the importance of soil investigation and determine various soil properties. |
| 2 | Understand the significance and determine the load bearing capacity for shallow and deep foundations |
| 3 | Learn the settlement behavior of different type of soil under different foundation. |
| 4 | Understand the concept of earth pressure behind earth retaining structures for different conditions. |
| 5 | Understand the concepts behind various ground improvement techniques. |

Course Contents

UNIT I

eneral principle of foundation Design.

Functions of loundations, Essential requirements of a good foundation, Types of foundations,

Principal modes of failure, Estimation of allowable bearing pressures, calculation of ultimate bearing capacity by theoretical and empirical methods: Terzaghi's Method, Skempton's analysis for clays, Meyerhof's analysis BIS Method (IS: 6403) settlement of foundations, Factors to be considered in foundation design; Environmental considerations.

Shallow Foundations :

Introduction, Essential requirements Type and depth of footings, contact Pressure below

footing strip footing, Isolated footing or Pad footing, Eccentrically loaded footings, Grillage foundations; Design features and construction details of combined footing, Strap footing or Cantilever footing Problem of frost heave, its causes and prevention effect of ground water Raft footing.

UNIT II

10hrs

Pile Foundations :

Purpose/Uses of pile foundations, Classification of piles based on different criteria, Details of

Timber, Concrete, Steel Piles their advantages and disadvantages selection of Pile Type, Pile action behavior of pile and pile groups under load. Definition of failure load.

Estimation of carrying capacity: Single driven pile in cohesion less soils-methods based of on SPT and CPT, ultimate load on Driven and cast-in-place piles and Bored and cast-in place piles in cohesion less soils. Factors affecting pile capacity. Ultimate capacity of single pile driven in cohesive soils. Modification for driven and cast-in-place piles and Bored and Cast-in-place piles. Carrying capacity of piles on rocks. Piles in fills-negative skin friction. Carrying capacity of Pile groups in cohesive soil and cohesion less soils, efficiency of pile group. piles subjected to horizontal or inclined loads.

UNIT III

15 hrs

Soil Stability.

Retaining walls-Types Elements for design, construction of cantilever and counter fort retaining walls. Unbraced excavations, braced excavations. Sheet Piles and Bulkheads-Types and design of cantilever and Anchored sheet piles; Anchors and Tie backs. Shorting and Underpinning- Necessity and methods.

Improvement of Foundation Soils.

Purpose: Improvement of Granular Soils : Terms used to describe degree of compactness-Relative Density Ratio and Degree of Compaction ;

CKUMethods -- Vibration at ground surface, factors influencing, roller compaction; Deep Dynamic Compaction, Vibro compaction, Impact at depth.

Improvement of Cohesive soils: Preloading or Dewatering, Methods of installing sand drains, drain wicks, Electrical and Thermal methods.

Grouting: Purpose, Functions Types of grouts; Soil Bentonite-cement mix, cement mix, emulsions, solutions: Grout Injection methods.

d) Geosynthetics : Types, Functions, Manufacturing of geotextiles, Classification of geotextiles.

Specific Applications: Bearing capacity improvement, Reinforcement, Retaining walls, Embankment etc. Testing of Geosynthetics usage in India and a case study.

UNIT IV

5 hrs

Special Considerations in Foundation Design and construction: Elementary Principles of design and construction of foundations subjected to earthquake ordynamic loads Special measures for foundations constructed under water.

Practical Exercises :

Conduct of standard Penetration Test and estimation of bearing capacity.

Determination of shear strength characteristics by field tests like in situ vane shear test, pocket penetrometer etc.

Computation of bearing capacity and settlement for given conditions of soil depth and type of foundation and loading.

Recommend a field investigation program to obtain design data.

Design of shallow foundations.

Recommend suitable dimensions. Depth and spacing of pile/pile group for given loading conditions.

Course Name: Maintenance of Building Structures

Course Code: A145202

Semester: 2nd

| L | Т | Р | C r |
|-----|------|------|--------------|
| 4 | 0 | 0 | 4 |
| Tot | al H | ours | 5: 40 |

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| CO | Statement |
|----|--|
| 1 | Assess the health condition of structures. |
| 2 | Inspect and evaluate damage structures. |
| 3 | Test the asses the condition of properties of existing concrete structures. |
| 4 | Implement the techniques for repairing of concrete structures. |
| 5 | Dismantle and demolish structures which cannot be repaired in an environment friendly, with maximum saving of materials and in a safe way. |

Course Contents

UNIT I

10hrs

Principles of Maintenance: Importance of Maintenance, Deterioration and durability, Factors affecting decision to carryout maintenance, Maintenance and GNP Agencies causing deterioration, effect of deterioration agencies on materials.

Design and economic consideration in Maintenance :

Factors to reduce maintenance at design stage, Consideration of maintenance aspects in preparing tender document and specifications, Sources of error in design which enhances maintenance, Importance of working drawings and schedules Provision of access for maintenance and its importance at design stage.

Economic consideration in Maintenance: Physical life, Functional life, Economic lige of different types of buildings, discounting technique for assessment of economic life.

UNIT II

10hrs

Maintenance Management: Definition, Organization structure, work force for Maintenance, Communication needs,

Building inspections, Maintenance budget and estimates, Property inspections and reports, Specification for maintenance jobs, Health and safety in maintenance, Quality in Maintenance, maintenance Manual and their importance.

Materials for maintenance:

Compatibility of repair materials, Durability and maintenance. Types of materials, their specification and application, Criteria for selection of material, Use of Commercial available materials in maintenance.

UNIT III

10hrs

Investigation and diagnosis for Repair of structures: Basic Approach to investigations, Physical inspection, Material Tests, Non destructive testing for diagnosis, Estimation of actual, loads and environmental effects, Study of design and construction practices used in original construction, Retrospective analysis, Confirmation and repair steps.

Building Defects and Remedial Measures:

Nature, types of problems, their causes, remedial measures and special treatment for building elements. Foundation, Basements D.P.C. Walls Wall finishes Chimney, stacks and shafts Columns and beams Roof and roof terraces Floor and floor finishes Joinery work Decorative/decorative finishes Services Materials Dampness

Acoustics :

Basic problems criteria and terminology, Transmission of sources in rooms, speech privacy

Between offices, co-efficient of source absorption, noise reduction co-efficient, classification selection of acoustical materials, design and installation of acoustical Treatment for of auditorium, schools religion buildings.

UNIT IV

10hrs

Air Conditioning Heating and Ventilation: Different types of heating equipment viz radiation converters, electric radiant panel heaters,

Requirements comfort conditions, temperature control, humidity control Mechanical ventilation plenum system, exhaust system fans, air filters of different types, air conditioning plants layout of ducts for cinema auditoriums and offices etc.

Fire Fighting: Fire regulations and requirements, cause of fire, fire resistance of materials, fire tests, firereissuance of elements, layout escape means for Multi storied buildings, Fire Training equipment different methods of fire fighting fire protection.

Electrical Services :

General distribution of electric power: Sub-stations for small schemes and industrial units, meter-rooms, electrical installations in buildings, Fuses and Circuit breakers, various types of conduits, earthling, switches and outlet, lamp holder electrical wiring -different materials employed specifications, electrical appliances and electrical service bye-laws pertaining to electrical installations. Different types of artificial lighting systems, lighting systems for residential buildings, public buildings, hotels, cinemas, hospitable exhibition, halls, libraries, schools, college, scientific laboratories etc.

Lifts and Escalators:

Classification types of lifts, lift codes and rules. Traffic analysis and selection of lifts, Quantity of service, Quality service, Car speed. Provision form fire safety Angle Arrangements of lifts, Details of information to be given to manufacturers, Escalators, Types and their installation.

| 4 | 0 | 0 | 4 | | | | | | | |
| Tot | Total Hours: 40 | | | | | | | | | |

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| СО | Statement |
|----|---|
| 1 | Create fully constrained solid models that can be quickly modified using standard software tools. |
| 2 | Use, identify and explain standard features in solid modeling including protrusions, revolutions, cutouts, and patterns |
| 3 | Ability to use standard software tools to create engineering drawings, or other documents, to fully describe the geometries and dimensions of parts, as well as to document assemblies according to standard practice |
| 4 | Ability to use standard software tools to create part assemblies and check for clearances. |
| 5 | Ability to create the drawings of farm implements and their analysis. |

Course Contents

UNIT I

10hrs

Introduction to CAD and its scope simple description of computer hardware. Micro, mini etc. memory, processor. Peripheral devices-disks, printer. Video terminals. Graphic floater, graphic screen digitizer.

UNIT II

10hrs

Computer Graphics: introduction, point plotting techniques, line drawing displays, two-three dimensional transformation, clipping and windowing, segmentation geometric modeling. Three dimensional graphics, curves and surfaces, hidden surface elimination, shading. Graphic input devices. Graphic input technique, input functions. Raster graphic fundamentals, interactive raster graphics, and raster graphic systems.

UNIT III

10hrs

Computer aided linkage displays and synthesis, interactive acceleration analysis. Appreciation of graphic packages. Matrix methods of structural analysis and associated computer Programme assembly of matrices.

UNIT IV

10hrs

Solution of equilibrium equations. Flow charts. Typical listing as illustrations. Introduction to interactive computer Programme for the design detailing of simple structural elements: RCC slab, beams, columns, isolated footings etc.Steel typical members and connections. Data base management, storing and retrieving of data

Course Name: Building Cost and Quality Management

Course Code: A145204

Semester: 2nd

| 4 | 0 | 0 | 4 |
|---|---|---|--------|
| L | Т | Р | C r |

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| CO | Statement |
|----|---|
| 1 | Evaluate the principles of quality management and to explain how these principles can be applied within quality management systems. |
| 2 | Identify the key aspects of the quality improvement cycle and to select and use appropriate tools and techniques for controlling, improving and measuring quality. |
| 3 | Critically appraise the organizational, communication and teamwork requirements for effective quality management |
| 4 | Critically analyses the strategic issues in quality management, including current issues and developments, and to devise and evaluate quality implementation plans |
| 5 | Understand the fundamentals of quality management for a project-based industry. |

Course Contents

UNIT I

10hrs

Estimation of quantities for R.C.C. multistoried complex viz. earthwork, concrete in foundation, D.P.C., R.C.C. work, flooring and roofing, plastering and pointing etc., wood work, white washing.

Analysis of rates for multistoried building works – Brick work in foundations and Superstructure, cement concrete, R.C. C., Plastering, Flooring, Timber work etc.

41

UNIT II

Checking of construction quality – various tests of bricks, cement, concrete, aggregates, and steel as per IS codes. Preparation of bills for payment, measurement book, mode of payment, running account bill. Ledger and Cash book details, Arbitration.

UNIT III

Estimation of building services viz. water supply works, electrification, sanitary fitting etc, and their cost analysis. Completion report of the project; Checking of Plan, Details of various works, and issue of completion report of the project.

UNIT IV

10hrs

10hrs

Instructions to the Examiner: Total eight questions are to be set out of which the students are required to attempt any five questions.

10hrs

Course Name: Pavement Design, Construction and Maintenance

Course Code: A145205

Semester: 2nd (Elective-II)

| L | Т | Р | C r | | | | | | |
|-----------------|---|---|--------|--|--|--|--|--|--|
| 4 | 0 | 0 | 4 | | | | | | |
| Total Hours: 40 | | | | | | | | | |

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| CO | Statement |
|----|--|
| 1 | Study the behavior of pavements under various loads |
| 2 | Design the flexible and rigid pavements using different Empirical, semi-empirical and theoretical approaches |
| 3 | Understand the concept of Pavement Management System, pavement failures and its evaluation |
| 4 | Learn about various methods of flexible pavement design. |
| 5 | Estimate the various methods of rigid pavement design |

Course Contents

UNIT I

10hrs

Introduction: Types of pavement structure. Functions of pavement components, Factors affecting pavement design. Design wheel load, Strength characteristics of pavement materials. Design of Flexible Pavements: General design considerations,

UNIT II

10hrs

Methods for design of flexible pavements; Group Index method, California Bearing Ratio (CBR) method, California Resistance Value method, Triaxial Test method, Burmister method, McLeod's method. Design of Rigid Pavements: General design considerations, Methods for design of rigid pavements; Westergard's method, F.A.A. method, IRC recommendations for design of concrete pavements, method, Types of joints and their design in cement concrete pavements. Thickness design for Airport pavement, LCN system of pavement design, design of airport pavement overlays.

UNIT III

10hrs

Highway Construction: Types of highway construction and their selection, materials for construction, construction procedure of different highways: Earth roads, Gravel roads, WBM roads, bituminous pavements, Cement concrete pavements, Low cost roads, Introduction to various equipment used for highway construction.

UNIT IV

10hrs

Highway Maintenance: Need for highway maintenance, Pavement failures their causes and remedial measures. Typical flexible and rigid pavement failures, Types of highway maintenance: Routine, periodic and special type, materials used for maintenance of different pavements, Strengthening of existing pavements, Maintenance management system.

Practical Exercises:

- 1. Determination of CBR value of sub grade soils.
- 2. Determination of Ductility of bituminous materials.
- 3. Determination of stripping value of road aggregate.
- 4. Determination of Marshall Stability value of bituminous mix.
- 5. Field visit for study of Batching and Mixing plant for bituminous construction of roads.

Instructions to the Examiner: Total eight questions are to be set, covering the complete syllabus, out of which, the students are required to attempt any five questions.

1. Roess, RP. McShane, WR. & Prassas, ES.(1998), Traffic Engineering. Prentice Hall.

2. May, A. D. (1990). Fundamentals of Traffic Flow. Prentice Hall.

The correlation levels are: "1" – Low Correlation, "2" – Medium Correlation, "3" – High Correlation and "-" indicates there is no correlation

Course Name: Rural Construction Technology

Course Code: A145206

Semester: 2nd

| L | Т | Р | C r | | | | | | | |
|------------------------|---|---|--------|--|--|--|--|--|--|--|
| 4 | 0 | 0 | 4 | | | | | | | |
| Total Hours: 40 | | | | | | | | | | |

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| *** | ^{CO} G | URU ^{Statement} KASHI |
|-----|-----------------|---|
| GKU | U | Niderstand intra construction techniques. |
| | 2 | Learn design principles of treatment-Low Cost water treatment technologies |
| | 3 | Understand Low cost pavement materials-testing |
| | 4 | Estimate the design & Construction of Tube well, Drip & Sprinkle irrigation systems |
| | 5 | Understand Drawing and Design of rural development plans. |

Course Contents

UNIT I

10hrs

Rural Development Planning and Concept of Appropriate Technology. Scope, Development Plans; Various approaches to rural development planning Concept of Appropriate technology; Role of Civil Engineering in Rural Development; Organizational structures & management rural development programmers/projects. Rural Housing : Low cost construction materials for housing low cost housing designs-architectural considerations for individual and group housing ; composite material-Ferro cement & flay ash, Autoclaved Calcium silicate bricks and soil-stabilized unburnt brick; Plinth protection of Mud Walls;

UNIT II

10hrs

Design Consideration and Construction of: Non-erodible Mud Plaster, water-proof and fire-retardant roof treatment for thatch roofs, Precast stone Masonry Block walling scheme; rat-trap bond for walls; Prefab Brick Panels for roof, Ferro cement flooring /roofing units, Thin R.C.Ribbed slab fon floors & roofs, Precast R.C. Channel Unit for flooring/roofing scheme, Precast R.C. cored unit for flooring/roofing scheme, Precast R.C. cored unit for flooring/roofing scheme, L-Pan roofing scheme; Glued Plywood Web Beams and Roof Panels; manual & Power Scaffold hoist, lifting device for prefab components; solar passive building design; Building economics and management.

UNIT III

10hrs

Water Supply and Rural Sanitation: Epidemiology sources of water, BIS & WHO water standards. Quality, Storage and distribution for rural water supply works; Basic Design principles of treatment-Low Cost water treatment technologies; Hand pumps-types, installation operation, and maintenance of Mark-II hand pump; Conservation of water; Rainwater, Harvesting; Drainage in rural areas, Design of

low cost waste disposal systems; Design and constructions of low cost latrines: 2 pit pour flush water seal VIP latrines, septic tank etc; Biogas technology: Low cost community & individual Garbage disposal systems, Recycling of organic/agricultural wastes: Development of village ponds; Ferro cement water storage tanks & latrines. Cattle shed management; Sewage farming-standards for disposal and use for irrigation.

Low Cost Roads and Transport: Low cost pavement materials-testing suitability criteria processing materials; factors affecting pavement thickness & composition of various layers; CRRI Design for rural roads-Traffic Index, strength Index, CBR curve Intermediate Technology & Technology options for specifies areas. Labor in tensile techniques of road construction Mechanical stabilization; lime stabilization; water bou Macadam Construction; utilization of waste in rural construction one/two coat surface dressing; bitumen premix carpet; low cost improved transport system rural areas.

UNIT IV

10hrs

Low Cost irrigation: Design & Construction of Tube well, Drip & Sprinkle irrigation systems; Water logging Reclamation land watershed and catchment area development-problem and features of watershed Management Plans watershed structures and their basic design catchment treatment and Rehabilitation Plans; Types of M Hydel Plants, site selection, Advantages of Mini & Mi Hydel projects, structures required for plants.

Course Name: Composite Materials

Course Code: A 145302

Semester: 3rd

| L | Т | Р | C r | | | | | | | |
|------------------------|---|---|--------|--|--|--|--|--|--|--|
| 4 | 0 | 0 | 4 | | | | | | | |
| Total Hours: 40 | | | | | | | | | | |

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| CO | Statement |
|----|--|
| 1 | Explain the behavior of constituents in the composite materials |
| 2 | Enlighten the students in different types of reinforcement |
| 3 | Develop the student's skills in understanding the different manufacturing methods available for composite material. |
| 4 | Illuminate the knowledge and analysis skills in applying basic laws in mechanics to the composite materials. |
| 5 | Apply constitutive equations of composite materials and understand mechanical behavior at micro and macro levels. |

Course Contents

UNIT I

10hrs

Fiber Reinforced Concrete: Properties of Constituent Materials, Mix Proportions, Mixing and Casting Procedures, Properties of Freshly mixed FRC, Mechanics and properties of Fiber reinforced concrete, Composite Material approach, Application of fibre reinforced concrete. Fly Ash Concrete: Classification of Indian Flyashes, Properties of Fly ash, Reaction Mechanism, Proportioning of Fly ash concretes, Properties of Fly ash concrete in fresh and hardened state, Durability of flyash concrete.

UNIT II

10hrs

Polymer Concrete: Terminology used in polymer concrete, Properties of constituent materials, Polymer impregnated concrete, Polymer modified concrete, Properties and applications of polymer concrete and polymer impregnated concrete.

Ferro Cement: Constituent materials and their properties, Mechanical properties of Ferro cement, Construction techniques and application of Ferro cement.

UNIT III

10hrs

High Performance Concrete: Materials for high performance concrete, Supplementary cementing materials, Properties and durability of high performance concrete, Introduction to silica fume concrete, Properties and applications of silica fume concrete.

UNIT IV

10hrs

Sulphur Concrete and Sulphur Infiltrated Concrete: Process technology, Mechanical properties, Durability and applications of sulphur concrete, Sulphur infiltrated concrete, Infiltration techniques, Mechanical properties, Durability and applications of sulphur infiltrated concrete. Light weight concrete: Properties of light weight concretes, Pumice concrete, Aerated cement mortars, No fines concrete, Design and applications of light weight concrete.

| 4 | 0 | 0 | 4 | | | | | | | |
| Total Hours: 40 | | | | | | | | | | |

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| СО | Statement |
|----|---|
| 1 | Enhance competence in design of advanced reinforced concrete structures. |
| 2 | Familiarize the students with the concepts of designing concrete mixes using different methods of proportioning and to understand the effects of various parameters |
| 3 | Show competency in design of advanced reinforced concrete structures. |

for selection of suitable structural system for tall buildings.

under gravity, wind and earthquake loading.

Course Contents

UNIT I

10hrs

Introduction to limit state method of design, provisions in the Indian standard codes for loading wind loads and seismic loads, design and detailing of concrete structures. BIS Handbook for design, Examples of design using handbook.

UNIT II

Design of Structures as per I.S. 1893 for Earthquake Resistant Design Construction. Design and Detailing Requirements as per 4326-1993.

UNIT III

Design and Detailing of Earthen Buildings as per 13827-1993. Design and Detailing of Masonry Structures as per I.S. 13828-1993

UNIT IV

Design and Ductile Detailing of R.C.C. Structures as per I.S. 13920-1993 Repair and Seismic Strengthening of Buildings as per I.S. 13935-1993.

Course Name: Disaster Reduction and Management

Course Code: A145303

Semester: 3rd

| | L | Т | Р | C r |
|---|-----|------|------|--------------|
| | 4 | 0 | 0 | 4 |
| r | Tot | al H | ours | 5: 40 |

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| CO | Statement |
|----|---|
| 1 | Provide basic conceptual understanding of disasters and its relationships with development. |
| 2 | Understand approaches of Disaster Risk Reduction (DRR) and the relationship between vulnerability, disasters, disaster prevention and risk reduction. |
| 3 | Understand Medical and Psycho-Social Response to Disasters. |
| 4 | Prevent and control Public Health consequences of Disasters |
| 5 | Enhance awareness of Disaster Risk Management institutional processes in India |

Course Contents

UNIT I

10hrs

Disaster Reduction :Earthquake resistant design of structures, Response spectra and design earthquake parameters, Principles and philosophies, Codal provisions, Factors affecting damage to structures, Enforcement of codal provisions, Strong motion instrumentation and data processing, Effective rescue operation, General planning and design aspects, Conventional earthquake resistant design, Seismic base isolation method, retrofitting, Training and lecturing at various levels, Preparedness to meet earthquake disaster,

UNIT II

10hrs

Programmers for public awareness, demonstrations and exhibitions, Information management (Safety, emergencies, management and planning, design, response, user experience problems and case studies), Proper land use practices, long term disaster preparedness measures. Precautions after a major earthquake, Preparedness for medical supply Emergency care (First aid, Home remedies), Disposal of dead bodies (Human and Cattle), Care for old and orphans.

Indirect Damages Damage due to ground failures, Landslides, rockslides, liquefaction, fire, floods, tsunamis, release of hazardous material like poisonous gas, nuclear radiation.

UNIT III

10hrs

Disaster Management- Management cell, Central crisis management core group, damage reconnaissance, Management of relief and rehabilitation (Infrastructure rehabilitation, Housing rehabilitation, Social rehabilitation), Role of volunteers, Emergency operation centers, Information system, Danger zone restrictions, Cooperation with local authority, Coordination for international relief, Role of government, NGO's, Business and donors.

UNIT IV

10hrs

Role of remote sensing in relief operations, Information management and related technologies in engineering and disaster management.

The design and management of Disaster Information Resource Network, Asian Disaster Preparedness Centre, Regional data base, Contacts and Sources, CD - ROM Library for Natural Disaster Management, Regional Disaster Documentation Centre, Non Governmental Organizations.

| CO | Statement |
|----|---|
| 1 | Evaluate workplace to determine the existence of occupational safety and health |
| | hazards |
| 2 | Identify relevant regulatory and national consensus standards along with best practices |
| | that is applicable. |
| 3 | Predict the appropriate control methodologies based on the hierarchy of controls |
| 4 | Analyze injury and illness data for trends. |
| 5 | Enhance their skill sets to deal with any situation in industry. |

UNIT I

10hrs

Operational Safety:

Hot metal operation, boiler, pressure vessels – heat treatment shop – gas furnace operation – electroplating – hot bending pipes – safety in welding and cutting, Cold – metal operation – safety in machine shop – cold bending and chamfering of pipes- metal cutting – shot blasting, grinding, painting – power press and other machines. Management of toxic gases and chemicals – industrial fires and prevention – road safety – highway and urban safety – safety of sewage disposal and cleaning – control of environmental pollution – managing emergencies in industries – planning security and risk assessments, on – site and off site. Control of major industrial hazards.

UNIT II

etermining the cost effectiveness of safety **UNIT III**

Safety And Health Regulations:

Safety and health standards – industrial hygiene – occupational diseases prevention welfare facilities. The object of factories act 1948 with special reference to safety provisions, model rules 123a, history of legislations related to safety – pressure vessel act – Indian boiler act – the environmental protection act – electricity act – explosive act.

UNIT IV

Safety Management:

Evaluation of modern safety concepts – safety management functions – safety organization, safety departmentsafety committee, safety audit – performance measurements and motivation – employee participation in safety - safety and productivity.

| Average | 1.6 | 2 | 2 | 1.8 | 1.8 | 2 | 2 | 1.8 | 2 | 2 | 1.6 | 2 | 1.8 | 1.8 | 1.6 |

10hrs

10hrs

Safety Appraisal And Analysis:

Human side of safety – personal protective equipment – causes and cost of accidents. Accidents prevention program – specific hazard control strategies – HAZOP training and development of employees – first aid – fire fight devices – accident reporting, investigation. Measurement of safety performance, accident reporting and investigation – plant safety inspection, job safety analysis – safety permit procedures. Product safety – plant safety rules and procedures – safety sampling – safety inventory systems. Determining the cost effectiveness of safety measurement

The correlation levels are: "1" – Low Correlation, "2" – Medium Correlation, "3" – High Correlation and "-" indicates there is no correlation.

Course Name: Construction Costing and Financial Management

Course Code:A145304

Semester: 3rd

| L | Т | Р | C r | | | | | | |
|-----|-----------------|---|--------|--|--|--|--|--|--|
| 1 | 0 | 0 | 1 | | | | | | |
| Tot | Total Hours: 40 | | | | | | | | |

Course Learning Outcomes: On successful completion of this course, the students will be able to:

| СО | Statement |
|----|--|
| 1 | Understand the various types of estimates that are used in the construction industry |
| 2 | Know how to prepare a quantity takeoffs and extend quantities to costs Prepare a bid recap/summary |
| 3 | Locate and compile information vital to the development and maintenance of schedules and budgets |
| 4 | Organize, calculate and present construction project budgets using common spreadsheet applications |
| 5 | Interpret the results of changes in the schedule or budget resulting from periodic progress or changes in the nature or scope of the project in an ethical manner |

Course Contents

UNIT I

Construction Costing : Costing of construction Works, different methods of costing, cost elements in a project, Analysis of rates, Non-scheduled items of work, Cost estimation for a small construction job, Purpose, methods and stages of cost control, cost monitoring, cost forecasting methods, variations in individual items of work and their effect on total contract price, valuation of variations.

Cash flow: Determining the funds required for a construction job, preparing cash flow statements, Cash inflow and outflow during contract period, Project expectations and performance models.

UNIT II

10hrs

Cash and payment of works; Precautions in custody of cash, impress account and temporary advance, Maintenance of temporary advance and advance account, different types of payment, first running advance and final payments.

UNIT III

15hrs

Material Management : Objectives and scope of material management classification, codification, ABC analysis, standardization and substitution, Introduction to inventory control, Stores management organization and lay out, receipt, inspection and issue, care and safety, store records and store accounting.

UNIT IV

5 hrs

Financial Management: Meaning and scope financial statement analysis, funds flow analysis, Capital budgeting, cost benefit analysis.

Practical Exercise:

- 1. Filling up of prescribed treasury challan form and imprest account form with given data.
- 2. Preparation of cash flow statement for a small construction project with given data.
- 3. Filing up of Daily labor report on prescribed form with given data.

10hrs

- 4. Recording measurement in M.B. for different work components.
- 5. Preparation of analysis of rates for different items of work.
- 6. Preparation of cost estimates for a small project.
- 7. Material statement and material analysis.
- 8. Carry out financial statement analysis, ratio analysis and funds flow analysis for projects from given case studies.

| Total Number of Credits | 87 |

Annexure-4

ACADEMIC INSTURCTIONS

Attendance Requirements

A student shall have to attend 75% of the scheduled periods in each course in a semester; otherwise he / she shall not be allowed to appear in that course in the University examination and shall be detained in the course(s). The University may condone attendance shortage in special circumstances (as specified by the Guru Kashi University authorities). A student detained in the course(s) would be allowed to appear in the subsequent university examination(s) only on having completed the attendance in the program, when the program is offered in a regular semester(s) or otherwise as per the rules.

Assessment of a course

Each course shall be assessed out of 100 marks. The distribution of these 100 marks is given in subsequent sub sections (as applicable).

| | | | Internal | (40) | | | External (60) | Total |
|----------------------|------------|----|-----------|------|-----|------|------------------|-------|
| Components | Attendance | | Assignmen | t | MST | MST2 | ETE | |
| | | A1 | A2 | A3 | 1 | | | |
| Weightage | 5 | 5 | 5 | 5 | 30 | 30 | 60 | |
| Average Weightage | 5 | | 5 | | | | 40 | 100 |

Passing Criteria

The students have to pass both in internal and external examinations. The minimum passing marks to clear in examination is 40% of the total marks.
